

Matt Maitland

Robotics Technician at Barn Owl Precision with a background in layered technical support, Windows and various Linux systems, networking, connected hardware, and software projects. Previously, I supported complex simulator systems. Outside work, I build web software and audio DSP tools, write and produce music, and work on research prototypes, including mmaitland.dev, StringFlux, NEUROCHEMICAL ENTROPY, and Research Radar.

EXPERIENCE

Robotics Technician

Current

Barn Owl Precision

Hands-on robotics technician role supporting robotic systems that need to operate accurately and consistently in dust, heat, and day-to-day use.

- Bring layer-by-layer troubleshooting habits from simulator support into robotics work, with emphasis on observation, isolation, and repeatable fixes.
 - Apply hardware, Windows, networking, and diagnostic experience in a hands-on equipment context.
-

Independent Software and Audio Development

2022 - Present

Self-directed

Self-directed web software and audio DSP projects, plus original music, maintained around full-time work with public notes on scope, decisions, and limits.

- [Built `mmaitland.dev` with typed content, CI, smoke tests, contact validation, rate limiting, and optional admin workflows.](#)
 - [Building StringFlux in JUCE/C++ with focus on real-time-safe behavior, narrow scope, and documented tradeoffs.](#)
 - Write case studies and decision notes so project pages explain the decisions, limits, and current state behind the demos and repositories.
-

Technical Support / Product Support Specialist

April 2024 - 2026

Auxillium

Supported complex simulator systems remotely, often with incomplete logs and limited direct hardware access.

- [Built repeatable triage notes for recurring failure patterns so similar tickets started from the right isolation steps instead of from scratch.](#)
- Worked through customer-facing simulator issues by isolating symptoms, testing likely causes, and documenting repeatable fixes.

SKILLS

Core Skills

Troubleshooting, Robotics systems, Systems diagnostics, Windows systems, Networking / TCP/IP, TypeScript, Next.js, React, Git / GitHub, Technical communication

Working Project Experience

Prisma, PostgreSQL, Auth.js, Tailwind CSS, Python, Zod, Resend / Upstash, C++, JUCE, DSP

Familiar / Earlier work

Flask / Django, MySQL, MongoDB, Machine Learning / CNN, Apache

EDUCATION

Bachelor's in Biochemistry

January 2014 to December 2016

University of South Florida

Associate in General Studies

January 2008 to December 2011

Florida Southwestern State College

CERTIFICATIONS

CompTIA A+

July 2023 to July 2026

Validated hands-on skills across hardware, software, networking, troubleshooting, security, mobile devices, and customer support.
